- 2 Three companies sell the same type of furniture.

The price of the furniture from Pooles of London is £1480

The price of the furniture from Jardins of Paris is €1980

The price of the furniture from Outways of New York is \$2250

The exchange rates are

$$£1 = €1.34$$

$$£1 = \$1.52$$

Which company sells this furniture at the lowest price?

You must show how you get your answer.

$$\text{PARIS: } \frac{1980}{1.34} = £1477.61$$

$$\text{New York: } \frac{2250}{1.52} = £1480.26$$

- 3 The time-series graph gives some information about the number of pairs of shoes sold in a shoe shop in the first six months of 2014

The sales target for the first six months of 2014 was to sell a mean of 96 pairs of shoes per month.

Did the shoe shop meet this sales target?
You must show how you get your answer.

$$\frac{110 + 84 + 78 + 94 + 90 + 120}{6} = 96$$

The shop met their sales target.

Dan has seven more marbles than Chris. $2x + 7$

They have a total of 57 marbles.

Dan says,

"If I give some marbles to Becky, each of us will have the same number of marbles."
